CALU-Graphics (800x480 enabled)

System requirements :
- PC with Intel based graphic adapter
- Windows XP/2000/NT, Linux, WinCE5, WinCE6
- Display from CarTFT.com with 800x480 native resolution and support for 800x480@60Hz
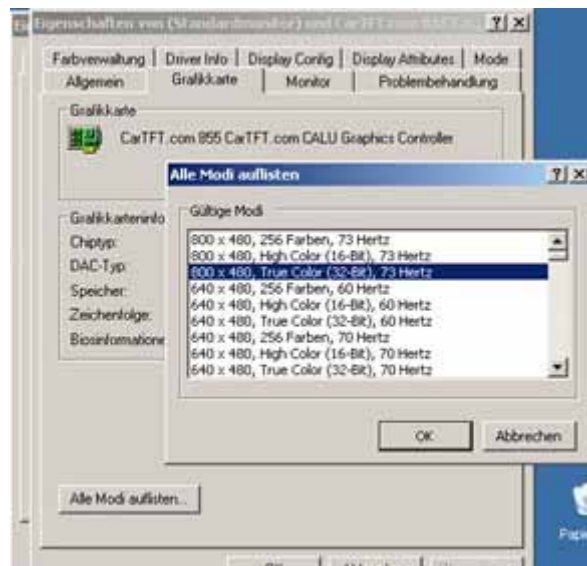

Hint :
If available, then deinstall the existing graphics driver from system manager, software section (add/remove programs). Then reboot the PC. Windows will try to reinstall the old drivers. Just cancel every installation attempt.

Installation :
1.) Switch to „Utilities"-directory of the driver package and start „Setup.exe" (or „SetupNT.exe" with Windows NT).

2.) Choose „Installs driver and application files".

3.) Confirm the software licence dialog with „I agree".

4.) Confirm all messages, which point to non-Logo compliant drivers with „Continue installation".

5.) After installation is done, the PC will reboot.

6.) The driver has been installed.

Enable 800x480-resolution :
Switch to display settings.

Then choose „Advanced" and „graphics adapter". Now click on "List all modes".

There are 3 different resolution „800x480, True Color (32-bit)" listed with different Hz-ratings. Please try all 3 and choose the one which suits best for your display.

Version 4.0, 27.06.2009
